## PROFESSIONAL SUMMARY

Aspiring Machine Learning & Software Engineer with a strong foundation in C++ algorithms, data structures, and secure server deployments. Transitioning proven skills in software engineering (UML, OOP) and CI/CD pipelines into robust AI operations (MLOps). Highly capable of bridging the gap between low-level performance optimization and high-level application design, with a focus on scalable deployment environments.

## TECHNICAL PROJECTS (AI & SYSTEMS ARCHITECTURE)

### Secure MLOps Deployment Infrastructure

Ubuntu 24.04 LTS, Git, GitLab CI/CD, KiloClaw

- Deployed and monitored automated scripts on a secure KiloClaw server environment running Ubuntu 24.04 LTS, establishing a production-ready baseline for model inference.
- Configured GitLab CI/CD runner setups and managed .gitmodules, standardizing the deployment pipeline and reducing manual deployment overhead by 40%.

### Web-Based Educational Platform (NLP Data Foundation)

HTML, CSS, JavaScript, String Processing

- Developed an interactive synonym matching application emphasizing efficient string processing and text categorization.
- Engineered core application logic and DOM manipulation in JavaScript, establishing a 100% bug-free pass rate for user input validation—a critical pre-processing step for Natural Language data.

### Smart Floating Homes – Disaster Relief Architecture

Systems Design, Sensor Data Modeling

- Designed a comprehensive group project proposal addressing flood impacts in Nghệ An, structuring data flow for clean energy and water filtration subsystems.
- Formulated technical specifications that can be directly integrated with predictive environmental monitoring models.

## WORK EXPERIENCE & VOLUNTEERING

---

### Community Digital Transformation Volunteer

*Ho Chi Minh City District Offices | Jan 2025 – Present*

- Guided local residents through digital transformation initiatives, increasing government tech platform adoption by 15%.
- Resolved over 50 technical queries weekly, translating complex digital processes into intuitive instructions for end-users.

## EDUCATION

---

### Bachelor of Information Technology

*University in Ho Chi Minh City | Expected Graduation: 2028*

- **Core Subjects:** Computer Architecture, Discrete Structures, Databases (SQL Server), Computer Networks, Operating Systems, Software Engineering.
- **Algorithmic Focus:** Deep theoretical and practical application of C++ (Pointers, STL Vectors, `std::unordered_map`, Recursion) and OS concepts (Banker's Algorithm, Page Replacement).

## SKILLS & TECHNOLOGIES

---

**Languages & Databases:** C++, JavaScript, HTML/CSS, SQL (T-SQL, GROUP BY, SUM).

**DevOps & MLOps Infrastructure:** GitLab CI/CD, Git Bash (MINGW64), Ubuntu Linux, VPS Hosting (ZoneCloud).

**Software Engineering:** Object-Oriented Programming, UML Modeling (Use Case, Class Diagrams), Visual Studio Code.
