PROFESSIONAL SUMMARY

Analytical Machine Learning Systems Engineer combining a deep foundation in C++ algorithms with hands-on MLOps infrastructure deployment. Specialized in bridging Natural Language Processing models with secure, high-availability server environments. Proven track record of optimizing CI/CD pipelines, automating task deployment on Linux architectures, and designing scalable solutions for data-intensive applications.

TECHNICAL PROJECTS (AI & MLOPS)

Secure AI Inference Infrastructure Deployment

Ubuntu 24.04 LTS, Git, GitLab CI/CD, KiloClaw Server

- Engineered an automated deployment pipeline on a secure KiloClaw server running Ubuntu 24.04 LTS, achieving a 99.9% uptime for automated analytical tasks.
- Configured advanced GitLab CI/CD runner environments and standardized .gitmodules, driving a 40% reduction in manual deployment overhead.

NLP-Driven Educational Platform Foundation

JavaScript, String Processing, DOM Manipulation

- Architected core logic for a synonym-matching and text-categorization application handling real-time string processing for age 5-7 demographics.
- Attained a 100% success rate in input validation during logic testing, establishing a resilient pre-processing layer suitable for foundational NLP datasets.

Environmental Sensor Data Architecture

Systems Design, Data Flow Modeling

- Spearheaded a disaster relief systems proposal for smart floating homes in Nghệ An, modeling 3 distinct clean energy and water filtration data subsystems.
- Designed data routing protocols built to integrate seamlessly with predictive machine learning models for early flood detection.

WORK EXPERIENCE

Digital Transformation Systems Volunteer

Ho Chi Minh City District Offices | Jan 2025 – Present

- Accelerated district-level digital technology adoption by 15% through the strategic onboarding of community residents onto government platforms.
- Diagnosed and resolved 50+ user technical barriers weekly, yielding a 95% satisfaction rate and streamlining the platform feedback loop.

EDUCATION

Bachelor of Information Technology

University in Ho Chi Minh City | Expected Graduation: 2028

- **Core Coursework:** Computer Architecture, Discrete Structures, Database Systems (SQL), Operating Systems, Software Engineering.
- **Technical Deep Dive:** Mastered C++ (Pointers, Vectors, `std::unordered_map`) and theoretical OS algorithms (Banker's, CPU Scheduling).

SKILLS & CERTIFICATIONS

- **Core Technologies:** C++, Python, JavaScript, HTML/CSS, SQL Server, Ubuntu Linux, GitLab CI/CD, Git Bash, PyTorch (Theoretical).
- **Certifications:** Google for Education Gemini Certification (Dec 2025).
