

Junior MLOps & Systems Engineer

Company: Aether Analytics | Location: Ho Chi Minh City (Hybrid)

About the Role

Aether Analytics is seeking a Junior MLOps Engineer who bridges the gap between software development and machine learning infrastructure. You will ensure that our AI models—ranging from NLP text processors to predictive environmental systems—run efficiently on secure Linux servers.

Key Responsibilities

- Deploy, monitor, and scale automated machine learning scripts on secure Ubuntu environments.
- Maintain and optimize CI/CD pipelines (e.g., GitLab CI/CD) to ensure rapid, reliable deployment of model updates.
- Collaborate with data scientists to optimize C++ and Python algorithms for real-time inference.
- Implement monitoring solutions to track model drift and computational performance (CPU/Memory).

Required Qualifications

- Strong theoretical and practical background in **C++**, Data Structures, and OS fundamentals.
- Hands-on experience with Linux server administration (Ubuntu) and secure task deployment.
- Proficiency in version control (Git) and CI/CD automation tools.
- Familiarity with foundational AI concepts (NLP or CV) and a strong desire to learn MLOps best practices.
