

Junior Computer Vision Engineer

Company: VisionaryTech Solutions | **Location:** Remote

About the Role

We are looking for a highly motivated engineer to join our Computer Vision team. You will help build and deploy robust machine learning models that analyze aerial imagery for environmental monitoring.

Key Responsibilities

- Design and train **Convolutional Neural Networks (CNNs)** for image classification and object detection.
- Optimize computer vision algorithms for deployment on secure server environments.
- Apply **Data Augmentation** techniques to improve model accuracy and robustness.
- Collaborate with cross-functional teams to integrate CV models into existing data pipelines.

Required Qualifications

- Strong foundational programming skills in Python or **C++**.
- Experience with deep learning frameworks such as PyTorch or TensorFlow.
- Familiarity with version control (Git) and CI/CD pipelines.
- Understanding of foundational computer vision algorithms and image processing techniques.
