

JOB DESCRIPTION: Senior AI & Full-Stack Engineer

Department: Engineering / AI Innovation

POSITION OVERVIEW

We are looking for a Senior AI & Full-Stack Engineer to architect and build enterprise-grade AI applications. You will be responsible for integrating Large Language Models (LLMs), building robust RESTful microservices, and leading frontend application development.

KEY RESPONSIBILITIES

- Design and deploy scalable AI/ML pipelines using Python, PyTorch, and LangChain.
- Develop high-performance backend microservices with FastAPI and PostgreSQL.
- Build modern, interactive client-side interfaces using React, Next.js, and TypeScript.
- Implement vector databases (ChromaDB / Qdrant) for Retrieval-Augmented Generation (RAG).
- Containerize services using Docker and maintain CI/CD pipelines with GitHub Actions.

REQUIRED TECHNICAL SKILLS

Languages: Python, TypeScript, SQL

Backend Frameworks: FastAPI, REST APIs, PostgreSQL, Redis

Frontend Stack: React, Next.js, TailwindCSS

AI/ML Stack: PyTorch, OpenAI API, LangChain, Vector Databases (ChromaDB/Pinecone), RAG Architecture

DevOps & Cloud: Docker, Git, CI/CD, Linux

QUALIFICATIONS & REQUIREMENTS

- Bachelor's degree in Computer Science, Software Engineering, or related technical field.
- 4+ years of professional software development experience.
