

JOB DESCRIPTION: Senior Backend Engineer (Go & Distributed Systems)

Department: Core Infrastructure

POSITION OVERVIEW

We are looking for a Senior Backend Engineer to build high-throughput microservices using Go (Golang), manage event streaming pipelines with Kafka, and orchestrate services on Kubernetes.

KEY RESPONSIBILITIES

- Build high-throughput microservices using Go (Golang) and gRPC.
- Manage event-driven stream processing pipelines powered by Apache Kafka.
- Deploy and orchestrate resilient microservices on Kubernetes (K8s) clusters.
- Optimize relational data storage using PostgreSQL and Redis.

REQUIRED TECHNICAL SKILLS

Primary Language: Go / Golang (4+ years mandatory)

Messaging: Apache Kafka, Event Streaming

Orchestration: Kubernetes (K8s), Helm, GCP / AWS

Protocols & Storage: gRPC, Protocol Buffers, PostgreSQL, Redis

QUALIFICATIONS & REQUIREMENTS

- 4+ years experience in Go (Golang) backend development.
- Deep expertise in Kafka event streaming and distributed messaging.
- Hands-on experience with Kubernetes and cloud infrastructure.
