

JOB DESCRIPTION: MLOps Infrastructure Platform Engineer

Department: Data Platform

POSITION OVERVIEW

We are looking for an MLOps Platform Engineer to build scalable data orchestration pipelines using Apache Spark and Airflow, implement model tracking with MLflow, and maintain Snowflake infrastructure.

KEY RESPONSIBILITIES

- Build scalable data orchestration pipelines using Apache Spark and Airflow.
- Implement model tracking, registry, and deployment automation with MLflow.
- Establish automated data quality verification and monitoring via Great Expectations.
- Maintain enterprise data warehouse infrastructure on Snowflake.

REQUIRED TECHNICAL SKILLS

Orchestration & Compute: Apache Spark, Apache Airflow

MLOps Stack: MLflow, Model Registry, Model Monitoring

Data Quality: Great Expectations, Prometheus

Warehousing: Snowflake, Python, SQL

QUALIFICATIONS & REQUIREMENTS

- Proficiency in Python, Spark, Airflow, MLflow, Snowflake, and Prometheus.
- Demonstrated experience in MLOps automation and continuous integration for ML models.
