

JOB DESCRIPTION: Cybersecurity & SOC Operations Analyst

Department: Information Security

POSITION OVERVIEW

We require a Cybersecurity Operations Analyst to monitor SIEM alerts, perform packet analysis with Wireshark, conduct vulnerability scans with Metasploit, and execute incident response procedures.

KEY RESPONSIBILITIES

- Monitor and analyze Security Information and Event Management (SIEM) alerts for threat detection.
- Perform packet analysis using Wireshark and conduct vulnerability scans with Metasploit.
- Execute incident response procedures for network intrusion attempts and malware containment.
- Implement network hardening policies and maintain firewalls across enterprise infrastructure.

REQUIRED TECHNICAL SKILLS

Security Tools: Wireshark, Metasploit, SIEM (Splunk/Elastic)

Operations: Incident Response, Malware Containment, Vulnerability Scanning

Network & OS: Network Protocols, Firewall Hardening, Linux Security

Certifications: Security+, CEH, or CISSP

QUALIFICATIONS & REQUIREMENTS

- 3+ years experience in Cybersecurity Operations, Incident Response, or Threat Intelligence.
- Deep expertise in Wireshark, SIEM tools, and network protocol inspection.
